(a) measurement cost
Pauli strings $\binom{N}{4}$
commuting groups
qubit-wise-commuting groups
count
Majoranas N
(b) volume law vs logarithm
XXX ground state
maximal $\frac{n}{2}\ln 2$
SYK ground state
half-cut entropy (nats)
qubits n
(c) flat gradients, brickwork ansatz
Var$[\partial_\theta E]$
guide to the eye
Var$[\partial E/\partial\theta_0]$
qubits $n = N/2$
